

Custom Medical Device Manufacturing

Injection Molded Components
Full Device Assembly Services

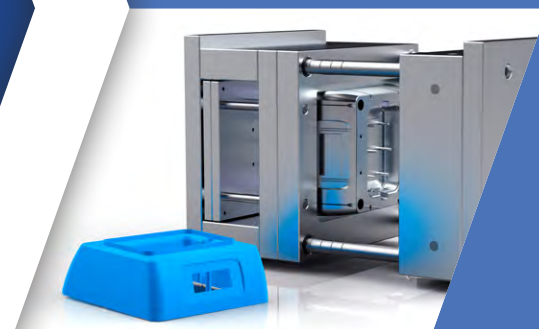

ISO 13485 certified
by Intertek

intertek

Total Quality. Assured.

FDA Registered

TAURUS

ENGINEERING & MANUFACTURING

Thinking Outside the Box

Taurus Engineering

35+ Years Solving Medical Device Challenges

Flexible. Responsive. Hands-On.

Taurus combines the responsiveness of a hands-on manufacturing partner with the engineering, quality systems, and manufacturing capabilities required for medical device programs. Our team works directly with customers from early development through validated production.

From Development → DFM → Validated Production

Our engineering and tooling teams work with customers early in the development process to identify molding risks, improve manufacturability, and establish a robust path to production.

- **Design for Manufacturability** – identify potential molding, tooling, gating, material, and tolerance concerns early
- **Tooling & Process Development** – tooling solutions designed around the application and production requirements
- **Production & Validation** – scalable manufacturing supported by documented processes and quality systems

Why Taurus?

Medical device programs require more than molding capacity. They require responsive engineering support, disciplined quality systems, reliable tooling, and a manufacturing partner that understands the path from development through production. Taurus brings these capabilities together under one roof.

Precision Molding for Tight Tolerance, High-Performance Components

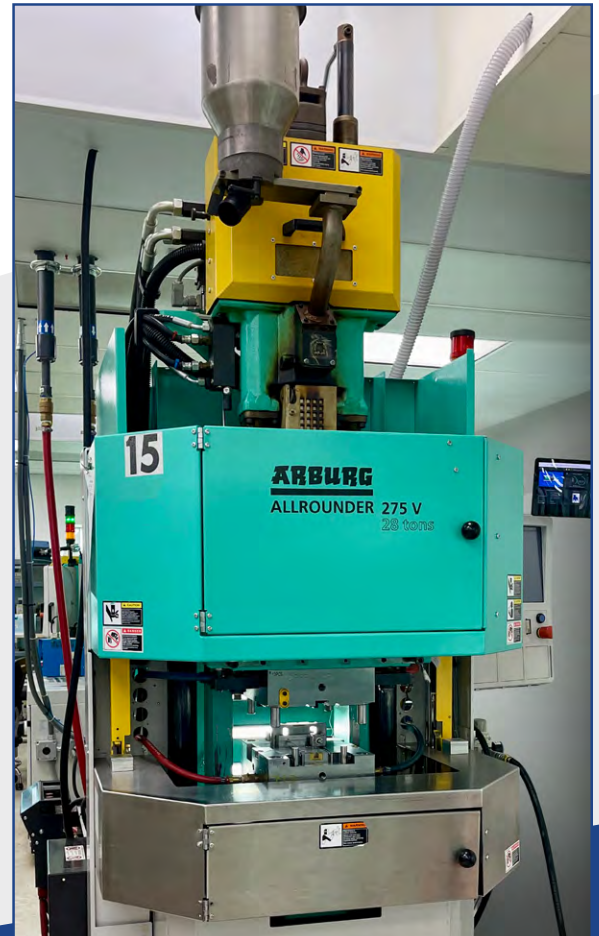

Taurus supports complex, tight-tolerance medical components from early development through validated production. Our team works with customers on material selection, DFM, tooling, process development, molding, assembly, and secondary operations to develop reliable and repeatable manufacturing processes.

Our molding capabilities include horizontal and vertical presses ranging from 28 to 350 tons, supporting prototype, low-volume, and production programs.

Capabilities

- Design for Manufacturability (DFM)
- Prototype & production molding
- Insert molding & over molding
- Horizontal & vertical injection molding
- ISO Class 7 cleanroom molding & assembly
- In-house mold design & mold building
- Multi-color pad printing
- Assembly, testing & secondary operations
- Process development & validation support

Taurus combines engineering, tooling, molding, and value-added services to support medical device programs from development through validated production. Our hands-on approach helps customers address manufacturability early, establish robust processes, and transition efficiently into production.
